128 Lakeside Ave #104
Burlington, VT 05401

I am a senior at the University of Vermont, currently pursuing a degree in Computer Science and Chinese. I am looking to gain professional experience and develop my software engineering skill set, and saw your internship posting for the spring of 2018. I believe I would make an excellent candidate for the Mobile App Developer Internship.

I have been programming for many years now, and have a wide array of skills. My main languages are Java, Python, and C++, but I have also had experience with several other languages, and numerous frameworks. For the past several months, I have been working on a University of Vermont iOS club app (called Clubster). Developing iOS apps, from building a backend with server side scripting for database access, to developing an easily navigable UI and ensuring a smooth user experience, has proven to be one of the most informative and interesting experiences I have had as a computer scientist, so far.

I am also quick to pick of new languages and frameworks, and am always excited to learn new things. I would love the chance to describe in more detail the kinds of projects I have worked on, and to see my possible compatibility for this role. It would be an honor to work directly for a local company that is based out of this beautiful city that I have already spent so many years in. I hope you consider my application, and look forward to hearing back from you.

Thank you,

Adam Barson
